

Locally Flown and Locally Grown!

Because Not All Application are Equal!

Agriculture aviators or “crop dusters,” help farmers protect soil and increase yields by controlling bugs, weeds, and plant diseases through the application of crop protection and improvement products. This helps ensure an abundant and affordable supply of food, fiber, and fuel.

Ag Pilots have the training, skill, and technologically advanced equipment necessary to safely do their important work without harming human health or the environment. Your local aerial applicator and the Iowa Agriculture Aviation Association are proud to provide the quality product and service to the agriculture community in our state and beyond.

So why not be **Locally Flown and Locally Grown.**

Call your local aerial applicator today or go to.....
